Summary

Computer Science graduate with hands-on experience in full-stack web development, cybersecurity, and machine learning. Developed and deployed multiple end-to-end projects including phishing detection systems, anomaly detection, and academic utilities. Active contributor to tech communities and continuously upskilling in modern development tools and problem-solving. Currently seeking opportunities as a Software Development Engineer (SDE), Software Engineer, or Researcher to apply my technical and analytical skills in impactful environments.

Education

Assam Down Town University , Guwahati B.Tech in Computer Science (GPA: 8.71 / 10.00) Relevant Coursework: DSA, OS, OOPs, DBMS, Networking, Cybersecurity, ML	<i>2020 – 2024</i>
Mahatma Gandhi Junior College , Goalpara Higher Secondary (PCMB) – 73.2%	<i>2016 – 2018</i>
Goalpara English School , Goalpara Secondary – CGPA: 9.6 / 10	<i>2015 – 2016</i>

Professional Experience

Concentrix, Gurgaon — Advisor I, Chat Process	<i>Sep 2024 – Jan 2025</i>
- Handled real-time customer support for Target (US) via chat, maintaining high CSAT and SLA performance. - Used CRM and internal ticketing systems to log issues, escalate tech-based queries, and generate resolution workflows. - Created and refined internal documentation and canned responses using templates and chat automation logic. - Collaborated with backend support teams to identify frequent technical issues and suggest workflow improvements.	
RadicalX (Remote) — Software Engineering Intern	<i>Nov 2023 – Feb 2024</i>
- Built and deployed task modules in the RadicalX Missions Dashboard using Python (Flask), HTML, CSS, JavaScript, and Bootstrap. - Designed backend REST APIs for features like subscription management and payout processing. - Integrated GitHub Codespaces API to streamline developer onboarding; automated deployment using GitHub Actions and Render. - Collaborated with product and UI teams via Figma and Slack to implement pixel-perfect layouts and feature specs.	
Psyliq (Remote) — SQL Intern	<i>Jan 2024 – Feb 2024</i>
- Wrote and optimized complex SQL queries to extract insights from structured datasets. - Built ER models for business use-cases involving relational data structures and joins. - Participated in case-based problem-solving assignments focused on customer segmentation and analytics. - Gained hands-on exposure to real-time query tuning and schema design in PostgreSQL.	
Data Exposys Labs (Remote) — Cybersecurity Intern	<i>Aug 2024 – Present</i>
- Implemented Triple DES encryption to secure image data and demonstrate secure transmission protocols. - Developed a Python-based interface to encrypt and decrypt visual data for academic use-cases. - Studied OWASP security practices and applied key concepts like confidentiality, integrity, and access control. - Documented encryption workflows and presented findings in internal demo sessions.	
Sane Infotech — Android Development Intern	<i>Sep 2022 – Feb 2023</i>
- Developed Android applications for trading and retail domains using Java, XML, and Firebase. - Implemented features such as user authentication, real-time data sync, and push notifications. - Followed the MVVM architecture for clean code and modular development. - Gained practical experience with Android Studio, UI design principles, and database integration.	

Projects

- **Phish-Shield** — Python, Flask, Scikit-learn, HTML/CSS: Real-time phishing URL detection tool that flags malicious links based on extracted URL features. Implemented classifiers like Random Forest to identify threats with high accuracy. Built a responsive web interface using Flask and HTML/CSS to enable interactive detection. Engineered the feature extraction logic to parse URLs and detect patterns like IP-based links and deceptive tokens.
- **Network Traffic Anomaly Detection** — Python, Jupyter, Scikit-learn, Pandas: Built a machine learning-based system to identify abnormal patterns in network traffic data. Trained models like Random Forest and Logistic Regression to detect DDoS, port scans, and spoofing attacks. Preprocessed and engineered features using pandas/numpy for improved classifier performance. Simulated a lightweight IDS pipeline for academic analysis and proof-of-concept demonstrations.
- **CKD Predictor** — TensorFlow, Streamlit, Python: Built a deep learning-powered prediction tool for early detection of Chronic Kidney Disease (CKD). Developed a neural network using TensorFlow to analyze medical parameters like creatinine, hemoglobin, and blood pressure. Implemented an interactive UI with Streamlit to allow real-time risk assessment for non-technical users. Focused on accessibility and explainability by visualizing model predictions and confidence levels.
- **Automated Summarization** — Java, Python, Firebase, ML: Developed a hybrid Android application to summarize text and image content using machine learning. Implemented TF-IDF for text and image metadata parsing for basic visual summarization. Built a real-time Android frontend using Java/XML and integrated Firebase for live data handling. Presented the project at ICAS DIGT as an applied research effort combining mobile apps and ML.
- **ADTU-QuesConnect** — Java, XML, Firebase: Designed and developed a mobile application to access ADTU's previous year question papers. Built the Android frontend in Java/XML and used Firebase for real-time cloud storage and sync. Added features like keyword-based search, paper uploads, and topic categorization. App served as a collaborative exam-prep resource widely adopted by ADTU students.

Certifications

- **Google Cybersecurity Professional Certificate**: Completed a structured program on securing computer systems and networks. Covered Linux system security, Python for automation, cryptographic tools, and threat modeling.
- **Microsoft Cybershiksha by Tata Strive**: Participated in hands-on labs and coursework focusing on network security, SQL injection defense, and ethical hacking with Kali Linux. Applied real-world techniques in cybersecurity environments.

Technical Skills

Languages: Python, Java, SQL, HTML, CSS, JavaScript

Frameworks/Tools: Django, Firebase, Android Studio, Bootstrap

Databases: MySQL

Concepts: DSA, OOP, ML, Web Dev, Cybersecurity, Networking

Achievements

- Topper's Scholarship – 3rd Year, ADTU
- 53,000 Rupees National Scholarship (DBT) one time, Govt. of India
- Presented at ICAS DIGT Conference
- GFG Contributor – Tech blogs and tutorials

Current Engagements

- Community Writer at GeeksforGeeks (GFG)
- Pursuing a Python Full Stack Development course from PySpiders. Completed modules on Python, OOP concepts, advanced Python, Oracle SQL, HTML, CSS, and JavaScript. Currently learning Django framework, ReactJS, and revising DSA fundamentals.
